International Foundation makes Awards to Top Nuclear Students at Imperial College, London

The European Foundation for Tomorrow’s Energies, under the aegis of the Institut de France in Paris, has awarded Grants of 4000 euros each, to six undergraduates studying nuclear engineering at Imperial College. The Foundation was set up 3 years ago by EDF Group, working in collaboration with Grandes Ecoles and universities in France to promote education and training in nuclear and other energy technologies. The students, who are in the third year of their 4 year M.Eng degree have been selected from each of the three undergraduate courses – Mechanical & Nuclear Engineering, Chemical & Nuclear Engineering, Materials & Nuclear Engineering.

In addition EDF in France and EDF Energy in the UK are each sponsoring a student on the current MSc in Nuclear Engineering with awards of £5000.

These awards are part of an on-going collaboration between EDF and Imperial College on Education, Training and Research in nuclear engineering and other topics related to the generation and application of electrical power.
